

III. REGION ORGANIZATION

The hierarchy of the American Society of Highway Engineers consists of a National Board of Directors, a nine Region structure, and (38) Sections. In designating the Regions, existing Sections were grouped according to geographic location and were created nearly equal in membership. Regional boundaries may be revised as new Sections are formed.

A Region with two or more Sections has a Regional Board of Directors consisting of one Regional Director from each Section in the Region. The primary functions of the Region are to encourage greater Section participation and communication, and to effectively serve ASHE's geographic interests.

The Region Organization Guidelines are included in the Operating Manual Appendix.
